2022 NEW PRODUCTS

SPORTING 2 SECURITHERM ELECTRONIC SHOWER PANEL

A simple and aesthetic anti-Legionella solution

Hygiene and infection control

Anti-scalding safety

Temperature stability

80% water savings

DELABIE has unveiled its new thermostatic electronic shower panel: SPORTING 2 SECURITHERM.

Hygienic, safe and economic, it guarantees optimal comfort.

Impeccable hygiene

Thanks to its electronic technology, there is no need for manual contact when using the SPORTING 2 SECURITHERM, preventing the spread of germs. The flow opens and shuts off when the sensor detects a hand. A 60-second flush occurs every 24 hours after the last use to purge the water distribution system. This helps the fight against bacterial proliferation which occurs when water stagnates in the pipework. A scale-resistant shower head adds to its hygienic attributes.

Preventative anti-Legionella solution

Legionella bacteria develop between 25 and 45°C, and in stagnant water. We recommend mixing the water as close as possible to the point-of-use to prevent its development. The SPORTING 2 SECURITHERM is an ideal solution: the shower panel is supplied directly by the hot water distribution system (at temperatures above 50°C) and by cold water also from the system. The thermostatic mixing valve integrated in the shower head blends the water to 38°C and delivers it immediately. There is no mixed water circulating between the hot water system and the shower, nor is there any standing water in the shower panel.

Optimal anti-scalding safety

SECURITHERM technology ensures the user's safety. It eradicates the risk of scalding thanks to the thermostatic mixing valve integrated within the shower head. If the cold water supply fails, the mechanism shuts off automatically to avoid delivering scalding hot water. The mixed water temperature can be pre-set by the installer.

Comfort for all

The mixer delivers a stable temperature regardless of pressure variations in the system, ensuring the user's comfort. If the hot water supply fails, the shower shuts off automatically to prevent cold showers. DELABIE also offers a version with a comfort shower head with a rain-effect spray (DP).

Installation and maintenance adapted for all configurations

This shower panel has also been designed to simplify installation. Several versions are available: exposed inlets to connect from the top in front of the wall; or recessed inlets to connect from the rear (from the top or from beneath). Maintenance is simplified, with direct access to the filters and non-return valves; and the stopcocks are also integrated within the shower head.

An economical and ecological solution

The SPORTING 2 SECURITHERM shower panel can deliver water savings of up to 80% compared to a conventional shower. The water flow can be interrupted at any moment by the user simply by passing their hand in front of the sensor. If the user forgets, shut-off is automatic after 60 seconds, which prevents waste. Finally, the flow rate is controlled and pre-set at 6 litres per minute.

SPORTING 2 SECURITHERM shower panel, ref 714910

PRODUCT BRIEF / SPORTING 2 SECURITHERM

The SPORTING 2 SECURITHERM is totally hygienic: there is no manual contact, and a daily duty flush prevents bacterial proliferation. With SECURITHERM technology, the user benefits from total safety (anti-Legionella solution, anti-scalding system) and optimal comfort. To simplify its installation, it is available in several versions to adapt easily to the installation type. Economical and ecological, it delivers up to 80% water savings and minimises waste.

DECK-MOUNTED TEMPOMATIC 5 ELECTRONIC BASIN MIXER & TAP

Simplifying the switch to electronic controls in public washrooms

Hygiene and infection control

Water savings

CR123 Lithium
battery-operated

230/6V mains supply

TEMPOMATIC 5 electronic basin tap Ref. 44900615

The TEMPOMATIC 5 mixer/tap offers a hygienic solution for users in public places. Its attractive positioning removes the price barrier to making the switch to 100% touch-free electronic controls and improving hygiene for users of public washrooms. Moreover, its low water consumption and easy maintenance make it a valuable solution to prevent the waste of resources.

Hygiene

The TEMPOMATIC 5 is a solution which guarantees total hygiene for public buildings. It removes any risk of spreading germs by hand, unlike conventional mixers and taps. The flow starts and stops automatically without any manual contact. The user is, therefore, fully protected.

The pipework is flushed daily, every 24 hours after the last use to prevent any bacterial development.

The TEMPOMATIC 5 is also equipped with a reduced-stagnation solenoid valve which replaces the water with every use, preventing any water stagnation inside the mixer or tap. The system is therefore also protected.

Water savings

The flow rate is pre-set at 3 litres per minute and can be adjusted from 1.4 to 6 litres. Thanks its automatic shut-off when hands are removed from the detection zone, the TEMPOMATIC 5 delivers 90% water savings compared to a conventional mixer or tap.

Simple to install and maintain

Installation is simple and no additional special action is required. A traditional mixer or tap can be replaced by a battery-operated TEMPOMATIC 5 without any electrical connection required.

Maintenance is quick and easy, which saves precious time in public buildings. Spare parts are available and are easy to access, ensuring that the product has an excellent lifespan.

Ergonomic

Touch-free, the TEMPOMATIC 5 activates when the user's hand are detected, and it stops when they are removed from the sensor zone. On mixers, the temperature is adjusted via a side control lever.

Design

The clean and timeless lines of TEMPOMATIC 5 allow it to fit perfectly into any public place and any installation type. DELABIE's mixers and taps will withstand intensive use and vandalism in public buildings. Their robust design and sleek lines prevent any attempt to remove them.

PRODUCT BRIEF / TEMPOMATIC 5 ELECTRONIC MIXERS & TAPS

DELABIE's TEMPOMATIC 5 electronic mixers and taps improve hygiene in public buildings thanks to their 100% touch-free operation. Their attractive pricing helps with the switch from manual solutions to touch-free electronic solutions. Their ergonomic design and ease of use offer convenience to all types of public places and users, whatever their level of autonomy. With its 90% water savings and its easy maintenance, TEMPOMATIC 5 prevents the waste of resources. 10-year warranty.

TEMPOFLUX 3 RECESSED

Time flow direct flush system with a design-led black glass flush plate for WCs.

Design

Water savings

Comfort

Waterproof housing

Refs. 763BOX-763000 and 763BOX-763040

The TEMPOFLUX 3 features an innovative recessing housing, patented by DELABIE. It adapts to all types of installation and to wall finishes from 10 - 120mm deep. Its new black heat-tempered glass flush plate combines the specific needs of public places (comfort, water savings and vandal-resistance) with an exacting aesthetic.

Water savings

The TEMPOFLUX 3 with 3L/6L dual flush function optimises the flush volume and saves water. The flush volume can be adjusted to 2L/4L, to achieve the highest levels of environmental labels. An anti-blocking feature controls the flush volume regardless of the length of time the user presses the button.

Comfort

Thanks to its soft-touch operation, the TEMPOFLUX 3 can be operated by any user (children, the elderly or people with reduced mobility). The acoustic level is reduced and complies with the European standard EN 12541 class II.

Design

The black glass flush plate on the TEMPOFLUX 3 follows the desire for design that is increasingly sought after in public buildings. The polished metal buttons and surround are aesthetic assets that also add to the robust nature of the TEMPOFLUX 3. The flush plate is also available in satin finish or chrome-plated metal.

Easy to install

There are multiple installation options for the housing: fixed to plasterboard rails by the sides; to solid walls from the front, or onto panels from the rear. The housing can be cut to size lengthways to adjust to walls up to 120mm deep: thick walls (bricks or breeze blocks) for public buildings exposed to high levels of vandalism. The TEMPOFLUX 3 can be connected from outside the housing to standard or "pipe-in-pipe" systems.

Secure flush

During installation, the cartridge can be replaced by a temporary casing to facilitate and ensure a safe system flush, without damaging this sensitive element.

Waterproof housing

Standard housings are designed to be cut to size behind the collar which increases the risk of leaks between the wall and the collar. DELABIE has developed a housing that can be cut to size in front of the collar which ensures that the installation is completely watertight. A seal integrated within the collar means that the housing is 100% waterproof. The collar simply clips onto notches on the housing which help to lock it in place (patented system).

Resistant to intensive use and vandalism

To avoid misuse and waste, the TEMPOFLUX 3 is equipped with an AB Anti-Blocking system. This security feature prevents the valve being blocked in the open position. The valve flushes only when the push-button is released.

Simple to service and maintain

The cartridge, flush actuator and stopcock are all accessible from the front. Simply remove the flush plate to gain access. The flush volume can be adjusted (3L/6L or 2L/4L) on the back of the flush plate, without shutting off the water or removing the valve. Unlike other products that are available, TEMPOFLUX 3's backflow prevention device is located inside the housing. In the event of any backflow, the water will be evacuated in front of the wall, via the housing, and not behind (or into) the wall. The valve is suitable for grey water and sea water. The valve can be disconnected and removed from the inside without removing the housing, making protection from frost and in-depth maintenance easier.

PRODUCT BRIEF / TEMPOFLUX 3

A recessed dual flush, direct flush valve with anti-blocking, featuring a design-led black glass flush plate.

DELABIE's time flow direct flush WC valve combines design, comfort and vandal-resistance. The studied design of its new black glass flush plate enhances public washrooms. The same housing can be installed in various ways: on plasterboard rails, solid walls or panels.

It is completely waterproof thanks to a patented system where the housing is cut to size in front of the collar. To simplify maintenance procedures, the sensitive elements (cartridge, filter and stopcock) can be accessed from the front, without removing the housing.

10-year warranty.

THE DROP DOWN SUPPORT RAIL, IT'S GOT LEG(S)!

Be-Line® drop-down support rail with leg

650mm rails available

Also available in 850mm

Metallised anthracite or matte white support rails

Ref. 511962W

Drop-down rails also available without legs

The DELABIE Group, an expert in accessibility in public places, having already presented us with the Be-Line® drop-down, removable support rail, now offers the drop-down support rail with a leg; meeting the need for safety and accessibility in all installations.

Design & Well-being

DELABIE continues its quest to deliver design for all with its Be-Line® range, demonstrating a combination of comfort and aesthetics in public places. Be-Line® removes the stigmatising and medical aspects of accessible equipment designed for those who have temporarily, partially or permanently lost their autonomy.

Designing pleasant and accessible washrooms is a challenge that the Be-Line® drop-down support rail rises to admirably. Its design-led concept features clean lines and a discreet aesthetic to blend naturally into washroom spaces. Available in metallised anthracite or matte white powder-coated aluminium, this drop-down rail provides a strong visual contrast with the wall, adapting to all decorative styles.

Safety and Living well

The Be-Line® drop-down, removable support rail has a rounded profile which, combined with an ergonomic flat front face, prevents rotation for an optimal grip. In addition to its safety pack comprising a 10-year warranty, CE mark, and testing to over 200kg, this Be-Line® drop-down rail has a leg which offers additional security to the user when a wall fixed version is insufficient. This leg also provides instant reassurance for people with reduced mobility who find using washrooms outside of the home a complicated and sometimes even frightening experience.

This Be-Line® drop-down support rail takes up minimal space when in the raised position. Since it is removable, it can also reduce the number of support rails installed in establishments which offer temporary accommodation such as hospitals and hotels. The support rail is therefore installed when required by the user, and when it is removed, it can be replaced by a cover.

For everyone

The design of this drop-down support rail transcends generations and can be used by anyone, regardless of their age or degree of autonomy. In public and commercial buildings, the user is unknown, so it is necessary to provide accessible equipment that can be used in every eventuality.

The Be-Line® range, which includes the drop-down rails as well as grab bars and shower seats, aims to deliver a feeling of well-being and living well by making the shared use of all sanitary spaces more pleasant, whether they are showers, toilets or washbasins.

PRODUCT BRIEF / THE DROP-DOWN SUPPORT RAIL, IT'S GOT LEG(S)!

The DELABIE Group, an expert in accessibility in public places, introduced the new Be-Line® drop-down, removable support rail a few months ago, now it has unveiled a version with a leg. Combining aesthetics and comfort, design and discretion, well-being and safety, this drop-down support rail with leg is not only suitable for all users - the elderly, people with reduced mobility or disabled people - but also for those installations which require additional reinforcement.

HAND WASHING: AN AUTOMATIC REFLEX!

TEMPOMATIC 4 electronic soap dispenser

TEMPOMATIC 4
electronic soap dispenser

Ref. 512031PUK

The DELABIE Group, an expert in sanitary equipment for public buildings, continues to innovate. Its flagship product, the TEMPOMATIC 4 electronic tap, has just found the ideal hygiene partner - the electronic soap dispenser. And, as with taps, to be 100% hygienic, it has to be 100% touch-free.

New hygiene partner

The TEMPOMATIC family called out for a basin-mounted soap dispenser! Like its colleagues in the tap range, it's electronic and, therefore, touch-free, with mains supply.

Thanks to an infrared sensor, the soap dispenser is more hygienic, avoiding any contamination by hand. A new weapon in the fight against bacteria!

Shared design

The TEMPOMATIC 4 electronic soap dispenser was specifically designed to match the TEMPOMATIC 4 range of mixers and taps from DELABIE. Their shared design, modern and universal aesthetic, and chrome-plated finish are the key elements which elevate public washrooms which have become a showcase for the hygiene and design of the whole building.

Three-way function

The TEMPOMATIC 4 electronic soap dispenser is compatible with liquid and foam soap as well as hydroalcoholic gel for models with a tank.

Thanks to the no-waste, non-drip dispenser, the right amount of soap for effective hand washing is always dispensed. The electronic soap dispenser therefore advocates waste prevention and efficiency.

Instant refill

Soap dispenser tanks need to be refilled regularly by maintenance staff. However, they are generally difficult to reach because the tank is often located under the basin or in inaccessible spaces. The TEMPOMATIC 4 deck-mounted electronic soap dispenser facilitates filling tanks thanks to the intuitive and innovative clip-on system of its removable tank.

PRODUCT BRIEF / HAND WASHING: AN AUTOMATIC REFLEX!

The DELABIE Group, an expert in sanitary equipment for public places has launched its new TEMPOMATIC 4 electronic soap dispenser. Available in a basin-mounted chrome-plated version, this product has been designed to match DELABIE's TEMPOMATIC 4 mixers and taps perfectly. The whole assembly is designed to enhance public washrooms, while encouraging total hygiene thanks to its touch-free operation and its compatibility with liquid and foam soap and hydroalcoholic gel.

BLACK IS BACK!

DELABIE's range of black accessories

Toilet paper dispenser

Toilet roll holder,
or for spares

Toilet brush set with lid

Coat hook

Refs. 510911BK, 4051BK, 4043BK

The DELABIE Group, an expert in sanitary equipment for public buildings, has already developed a range of black products which includes BLACK BINOPTIC electronic taps, hand dryers, electronic soap dispensers, etc. Now we have a complete range of black accessories with which to equip washrooms in public buildings.

Paint it BLACK!

DELABIE has produced a whole selection of accessories in a matte black finish to add to its range of sanitary ware and fittings.

This range of matte black accessories now includes a coat hook, toilet brush set, toilet roll holder and paper towel dispenser.

The objective is to create the perfect partners for DELABIE's black products, and in particular the BLACK BINOPTIC, as well as the new BLACK MAGIC stainless steel sanitary ware with a matte black Teflon® finish, such as the washbasins, WCs and urinals.

Designed for Public Buildings

This range of black accessories is specifically designed for buildings open to the public, since its robust design is able to withstand intensive use in commercial buildings.

Public buildings face a different set of challenges to those found in domestic settings; which is why DELABIE's accessories are designed to meet them in terms of easy maintenance, easy to clean, and anti-theft systems, etc.

Modern and elegant design

Washrooms in public buildings are now considered a showcase for the whole building, whether for hygiene or for design.

Upgrading these public spaces goes hand-in-hand with the development of the BLACK MAGIC collection at DELABIE.

These matte black accessories, with their modern and elegant design, will suit any living space and adapt to any interior decorative style.

PRODUCT BRIEF / BLACK IS BACK!

The DELABIE Group, an expert in sanitary equipment for public buildings, has extended its BLACK MAGIC range to include a selection of accessories, creating an entire range of products with a matte black finish. This range has been developed to provide the perfect match for DELABIE's black products and the BLACK BINOPTIC taps and Black Magic sanitary ware range in particular. The goal is to create a design collection which improves sanitary spaces while meeting the needs of public buildings.

HYGIENE WITH NO COMPROMISES!

BINOPTIC basin-mounted electronic soap dispenser

BINOPTIC basin-mounted electronic soap dispenser, chrome-plated

Available in a matte black version

Ref. 512521PUK

The DELABIE Group, an expert in sanitary equipment for public buildings, offers variety and the variants. The BINOPTIC electronic soap dispenser already exists in a wall-mounted version, and now we find it as a basin-mounted version that is still 100% touch-free and, therefore, 100% hygienic.

Detection solution!

The BINOPTIC family is expanding. Hygiene is a priority with this basin-mounted electronic soap dispenser. Touch-free, it is electronic and mains powered.

Hands are detected by an infrared sensor which allows more hygienic hand washing, avoiding possible contamination by hand. An effective weapon against bacteria.

From the wall to the basin

The BINOPTIC electronic soap dispenser matches DELABIE's BINOPTIC taps perfectly thanks to their common design.

Already familiar as a wall-mounted version, now the new basin-mounted version has arrived in the washrooms of public buildings.

In chrome-plated or black versions, the BINOPTIC basin-mounted electronic soap dispenser has a modern and universal appeal, contributing to the move to more up market washroom facilities. These latter are now considered as representative of the image of the whole building.

Liquid, foam ... and gel!

This electronic soap dispenser is compatible with liquid and foam soap as well as hydroalcoholic gel for models with a tank. What's more, the right amount of soap is always dispensed thanks to the no-waste, non-drip dispenser which it features.

The crafty tank

Soap dispensers are often one of those washroom accessories which can be difficult to reach because the tank is often located under the basin or in inaccessible spaces. The BINOPTIC basin-mounted electronic soap dispenser facilitates filling tanks.

The innovative and unique clip-on system of the removable tank is designed to make it easy to use and make it intuitive for maintenance staff.

PRODUCT BRIEF / HYGIENE WITH NO COMPROMISES!

The DELABIE Group, an expert in sanitary equipment for public buildings, presented us with its BINOPTIC wall-mounted electronic soap dispenser, and now it has extended its offer with a basin-mounted version. Available in chrome-plated or black finishes, these products have been designed to match DELABIE's BINOPTIC taps, contributing to improving washroom facilities in public buildings. Touch-free and compatible with liquid or foam soap, and even hydroalcoholic gel for those versions with tank, total hygiene is guaranteed.

FINO urinal in matte black ref. 135710BK

Ref. 120810BK - 379MCHB - 512151BKUK - 510622BK

Black fixtures and fittings are the new design trend in commercial washrooms

Already familiar in domestic kitchens and bathrooms, this trend is now spreading to commercial washrooms. A timeless classic, black sanitary ware is a sure-fire way to bring style to washrooms, offering retro-chic with an industrial edge.

DELABIE, European market leader for water controls and sanitary fittings for public and commercial places, understands that specialist products are required that will withstand intensive use and that are easy to clean to ensure optimal hygiene for all users.

This is why DELABIE has chosen to develop a range of 304 stainless steel sanitary ware with a matte black Teflon® finish. These new washbasins, WCs and urinals follow this design trend and meet the needs of public places.

Teflon® or PTFE, a durable finish that is easy to clean

The new range of black sanitary ware from DELABIE is made from 304 stainless steel, making them resistant to intensive use (unbreakable) and light - a valuable characteristic when it comes to installation. This stainless steel is coated with a matte black Teflon® finish.

Teflon® or PTFE is a chemical-resistant material. This is the same finish that is used on the pots and pans in our kitchens. But since sanitary ware (washbasins, WCs and urinals) is not subject to the same challenges as kitchen ware - high temperatures, sharp knives, etc., so

the black finish will remain intact for a long time. In addition, Teflon® is a non-stick surface. Scale, the main challenge to black finishes, will struggle to find purchase on the surface. Washroom cleaning and servicing is therefore simplified.

Paint it black!

The range of stainless steel sanitary ware with a matte black Teflon® finish now consists of 15 references: inset and countertop washbasins; wall-mounted washbasins; wall-hung or free-standing WC pans; WC pans for disabled toilets; WCs without cisterns; urinals and urinal dividers. These references are held in stock and are instantly available for despatch as individual units.

The washbasins are supplied without a waste, allowing specifiers to choose their decorative style: adding a black waste for a totally black ensemble, or a chrome-plated waste for a black/chrome mix-and-match look to match chrome-plated taps.

The new stainless steel sanitary ware with a matte black finish complements DELABIE's water controls and accessories which are also available in a matte black finish. So, if you want to equip your washrooms with products that are on trend, and that meet the needs of public washrooms, DELABIE has the solution - and now offers a complete range for washbasins, WCs and urinals.

PRODUCT BRIEF / MATTE BLACK WASHROOMS - BY INVITATION ONLY!

Do you want to bring style to your non-domestic washrooms? DELABIE's stainless steel range with a matte black Teflon® finish delivers exclusivity in spades. These new washbasins, WCs and urinals bring design to public washrooms while ensuring durability, and optimal hygiene - completely indispensable for public and commercial washrooms.

And to complete the picture, don't forget DELABIE's water controls and accessories with a matte black finish.

AZA STAINLESS STEEL URINAL DIVIDER

Install alongside the FINO stainless steel urinal and bring style to your washrooms!

Stainless steel, a noble and stylish material

Stainless steel, essential for hygiene

Stainless steel, a resilient and unbreakable material

Stainless steel, 100% recyclable

Ref. 100620

Stainless steel, an alternative to ceramic in commercial washrooms

In public and commercial places it is important to have stylish and clean washrooms to earn the respect of users and minimise vandalism.

DELABIE, European market leader for water controls and sanitary fittings for public and commercial places, has been offering a wide range of stainless steel sanitary ware for several years, all of which meet these requirements.

Stainless steel, inexorably made for design

Stainless steel is the ideal material for commercial washrooms. Durable and unbreakable, it is often specified in places that are subject to high levels of vandalism. But stainless steel should not be the preserve of prisons only! It is also essential for hygiene. Used widely in hospitals and professional catering, it is bacteriostatic: bacterial retention after cleaning is extremely low.

Moreover, stainless steel is a noble, stylish material which matches any washroom design. It is, therefore, at home in restaurants, offices, shopping centres, museums, schools, hotels, etc.

Finally, stainless steel respects the environment. 100% recyclable, it contributes to sustainable development and protecting the environment.

AZA stainless steel urinal divider

DELABIE has extended its range of stainless steel dividers with the new AZA urinal divider. Its minimalist design fits perfectly into trendy washrooms. Made from bacteriostatic 304 stainless steel, its one-piece shape limits the number of niches where bacteria can develop, making it easier to clean and ensuring optimal hygiene.

Lightweight and discreet, it is the perfect partner for the FINO stainless steel urinal, and is right at home in public places such as restaurants, offices or hotels.

LAVANDO WC stainless steel hand washbasin

DELABIE has designed the LAVANDO WC hand washbasin to extend its range of stainless steel sanitary ware. Its all-purpose rectangular shape can be integrated in disabled toilets or washrooms where space is limited. Made from bacteriostatic 304 stainless steel, its pressed bowl minimises niches where bacteria can develop, improving cleaning and, therefore, hygiene. Lightweight, it is available with a Ø 35mm tap hole on the left (ref. 121360) or the right (ref. 121370).

Stylish, this new stainless steel hand washbasin for WCs enhances your washrooms and will fit easily into restaurant, office or hotel washrooms.

NO MORE NON-RETURN VALVES! THE THERMOSTATIC SHOWER MIXER WITH NO CROSS FLOW

H9768TP: Dual control shower mixer, no non-return valves

Ref. H9768TP

The H9768TP SECURITHERM thermostatic shower mixer meets the needs of health and care facility users in terms of anti-scalding safety, hygiene and comfort while allowing the manager to optimise the water bill. The unique design of this mixer makes cross flow between the hot water and the cold water impossible, considerably reducing the risk of bacterial proliferation.

Anti-scalding safety

SECURITHERM: total anti-scalding safety

As with all of DELABIE's SECURITHERM thermostatic mixers, this new shower mixer ensures total anti-scalding safety.

The thermostatic cartridge ensures temperature stability whatever the variations in the pressure and flow rate in the system.

The H9768TP mixer is fitted with a double temperature limiter, the first is set at 41°C and can be overridden, and the second is pre-set at 43°C, so the user has no risk of scalding themselves.

The thermostatic technology provides an automatic failsafe. If the cold water supply fails unexpectedly, the hot water shuts off immediately and completely. Similarly, if the hot water supply fails, the cold water shuts off immediately and completely, avoiding the risk of a cold shower which could cause the user to lose their balance or fall.

The H9768TP mixer also benefits from Securitouch technology, preventing any risk of burns when touching the body.

It is also possible to undertake thermal shocks at the temperature of the hot water in the system. Unscrew the temperature control cap using an Allen key and turn the valve spindle clockwise all the way to override the temperature setting.

Hygiene and infection control

BIOSAFE: infection control

Cross flow between the Hot and Cold Water is impossible

The H9768TP shower mixer has been specifically designed to limit the risk of bacterial development.

Due to its design, cross flow between the hot and cold water is totally impossible. Indeed, DELABIE has developed a unique, patented thermostatic mixing valve where cold and hot water shut off at the inlets, which renders non-return valves completely unnecessary.

There is no specific maintenance required and the risk of cross flow is removed.

Certified to the French standard NF M (Medical), this mixer has been designed to reduce the volume of standing water in the mixer to a minimum and, therefore, reduce the risk of bacterial development.

Water and energy saving

With a flow rate of 9 litres per minute, the H9768TP mixer saves water while preserving user comfort. The water savings make it possible to reduce energy consumption and economise in terms of equipment. Moreover, the lower the volume of water in the installation, the lower the risk of bacterial proliferation.

The H9768TP SECURITHERM Securitouch thermostatic shower mixer is also available as a shower kit for exposed installation.

A small chrome-plated shelf is now available to fit onto the mixer as an option. Body hygiene products such as shampoo or shower gel can be placed on the shelf by users.

PRODUCT BRIEF / SECURITHERM THERMOSTATIC SHOWER MIXER WITH NO CROSS FLOW

H9768TP: Dual control thermostatic shower mixer, with no non-return valves

The H9768TP SECURITHERM Securitouch thermostatic shower mixer has been specifically designed to meet the needs of users in healthcare facilities and care homes. Due to its unique design, lack of non-return valves, very low volume of water in the body, etc. ... this mixer reduces the risk of bacterial proliferation considerably. It also ensures total anti-scalding safety for the user: temperature stability is guaranteed thanks to the thermostatic technology; maximum temperature limiter; hot water shuts off immediately if the cold water supply fails; the mixer body has thermal insulation; etc.

10-year warranty.

100% WATERPROOF, THE H9633 and 2551(EP) RECESSED SHOWER MIXERS ARE WELL CONNECTED!

A 100% waterproof, modular and adjustable recessing housing

Anti-scalding safety

Temperature stability

Refs. H9633 and 2551

DELABIE has redesigned its recessed shower mixers by equipping them with a new 100% waterproof recessing housing. This innovative system adapts to multiple installation configurations. They are designed to contribute to patient safety, the prevention of nosocomial infections and to general comfort.

BIOSAFE: infection control

DELABIE's recessed shower mixers have been specifically designed with an interior which reduces the volume of standing water in the body and, therefore, reduces the risk of bacterial development considerably.

Automatic anti-scalding safety

The recessed mechanical shower mixers, with pressure-balancing (EP) and thermostatic technology, are fitted with a pre-set maximum temperature limiter. The user cannot override the temperature limiter, reducing the risk of scalding.

The thermostatic and EP versions are also equipped with SECURITHERM technology which shuts off the hot water supply automatically and instantly if the cold water supply fails. With DELABIE's thermostatic mixers, the hot water supply shut off is complete (with no trickle of water). With the pressure-balancing mixers, the flow rate is reduced to a very small trickle. If the hot water supply fails, DELABIE's SECURITHERM mixers also shut off the cold water supply.

Moreover, with these recessed shower mixers it is possible to undertake thermal shocks at the temperature of the hot water in the system. On the the EP and mechanical versions, simply press the red button located behind the control lever. On the thermostatic model, remove the lever to override the temperature limiter.

Temperature stability

DELABIE's recessed mechanical shower mixers are designed to reduce the temperature variations that occur when there are pressure changes in the system. Pressure-balancing models compensate for the variations in pressure between the HW and CW at the inlets, delivering water at a constant temperature. The SECURITHERM thermostatic versions ensure temperature stability regardless of pressure and flow rate variations in the system: the thermostatic cell reacts immediately to any fluctuations.

100% waterproof

The recessed shower mixers are equipped with an innovative, waterproof housing which is patented by DELABIE. This new design combines design and functionality. Standard housings are cut flush to the wall, which increases the risk of water ingress. DELABIE has developed a housing which is cut to size in front of the collar, ensuring a waterproof seal. The seal integrated at the rear of the collar makes it completely watertight.

The H9633 and 2551(EP) recessed shower mixers are equipped with an angled outlet for the mixed water on the control plate: the product is therefore 100% waterproof.

Modular

There are multiple installation options.

The same housing can be installed:

- on plasterboard rails (by the sides)
- on the wall (from the front)
- on panels (from behind)

Adjustable

The cut-to-size housing is the only one which can adapt to thick walls as well as thin partitions. 120mm in length, it can be installed on bricks or breeze blocks.

The minimal installation option is on partitions of 10mm.

Simple and quick to install

The housing can be connected to a standard or "pipe-in-pipe" supply. The hydraulic connection is made from the outside of the housing. The housing is supplied with temporary caps to flush the system safely. They are then replaced by the ceramic or thermostatic cartridge, filters and/or the non-return valves.

The housing has notches. Once the wall finish is complete, the collar simply clips onto the housing (patented system). Thanks to the seal within the collar, the housing is watertight without the need for additional actions by the installer (silicone, etc).

This collar has a dual role, acting as a waterproof seal and as a support to fix the wall plate in place.

Also available without an angled outlet.

PRODUCT BRIEF / RECESSED SHOWER MIXERS

DELABIE has redesigned its recessed shower mixers, equipping them with a new, 100% waterproof recessing housing.

This innovative system adapts to multiple installation types, and up to 120mm installation depth. Maintenance is simplified: access is via the front of the housing by simply removing the cover plate. They are designed to contribute to patient safety, the prevention of nosocomial infection and general comfort in healthcare facilities.

They are available in mechanical, pressure-balancing (EP) and thermostatic versions. 10-year warranty.
