At OE Electrics, we endeavour to provide solutions that suit people's different work styles and ways of working. Much of our portfolio has been centred around the office workstation, providing power and data connectivity in a variety of aesthetically pleasing packages to be used in the open plan office environment.

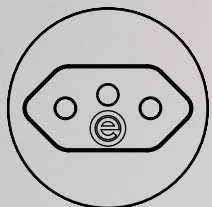

pluto^o
because life isn't one sided

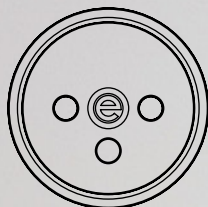

However, in recent years job roles and, just as importantly, working preferences have changed from those tied to a workstation, to a far more relaxed environment with the use of breakout spaces for more informal, collaborative and social working.

PLUTO satisfies a demand for power and data connectivity, in these informal spaces, in a way that no other module has done before. Perfectly suited to breakout areas, smaller meeting rooms and coffee tables - PLUTO makes sharing power a pleasure.

twin USB fast
charger

Studies show that people work far more effectively in small groups and indeed new ideas come from people working in pairs. With over 25 years experience in the market, and as leaders in terms of design and practicality, OE Electrics have developed PLUTO to match our customers' desire for a solution that fits these new ways of working.

With 3 outlet positions, Pluto is perfect for a small team to power/charge their devices using conventional mains plugs, however, that is far from the whole story.

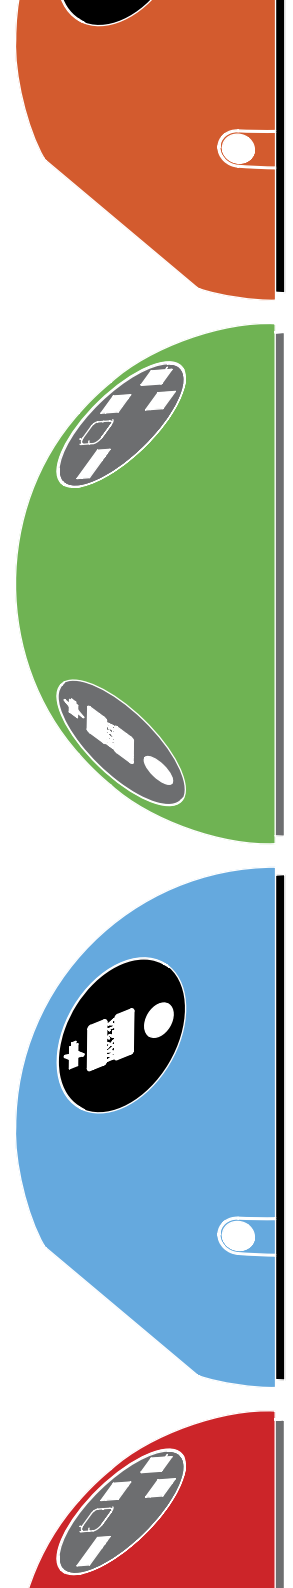

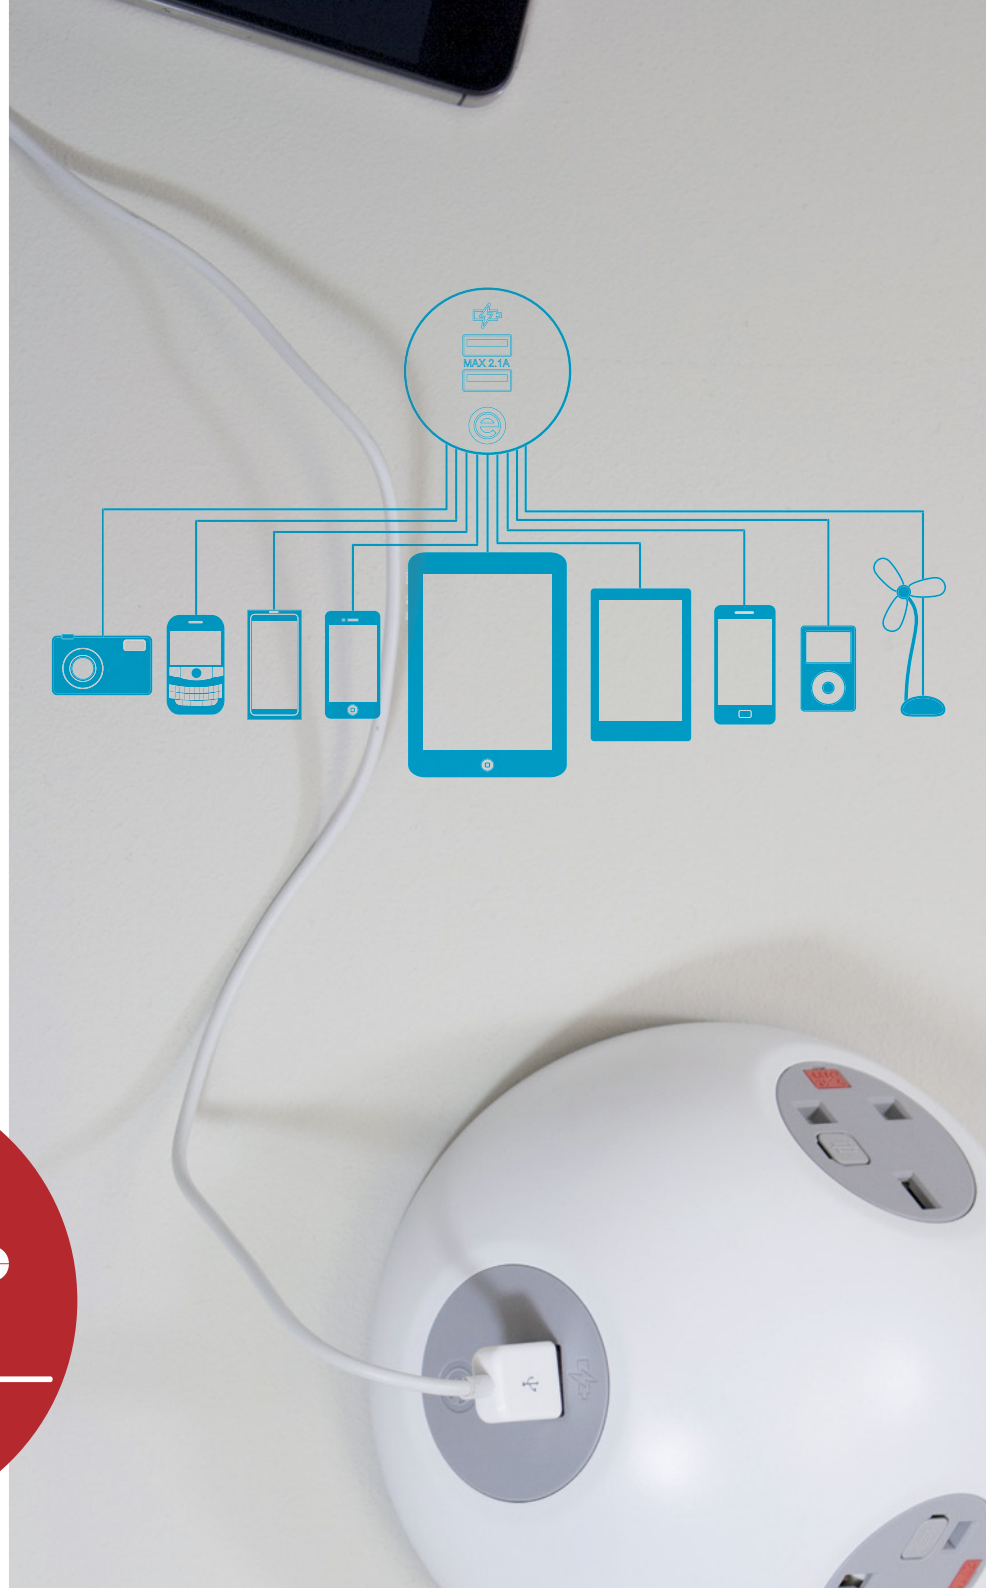

lets work together

Our NEW range of circular outlets encompasses mains power outlets (including many international versions⁺), data and AV provision and most recently the most compact Twin USB Fast Charger in our market.

The design specification for our TUF charger was that it could fast charge tablets and mobile phones of all brands without limitation – and in 2012, after much painstaking development and testing, we succeeded!

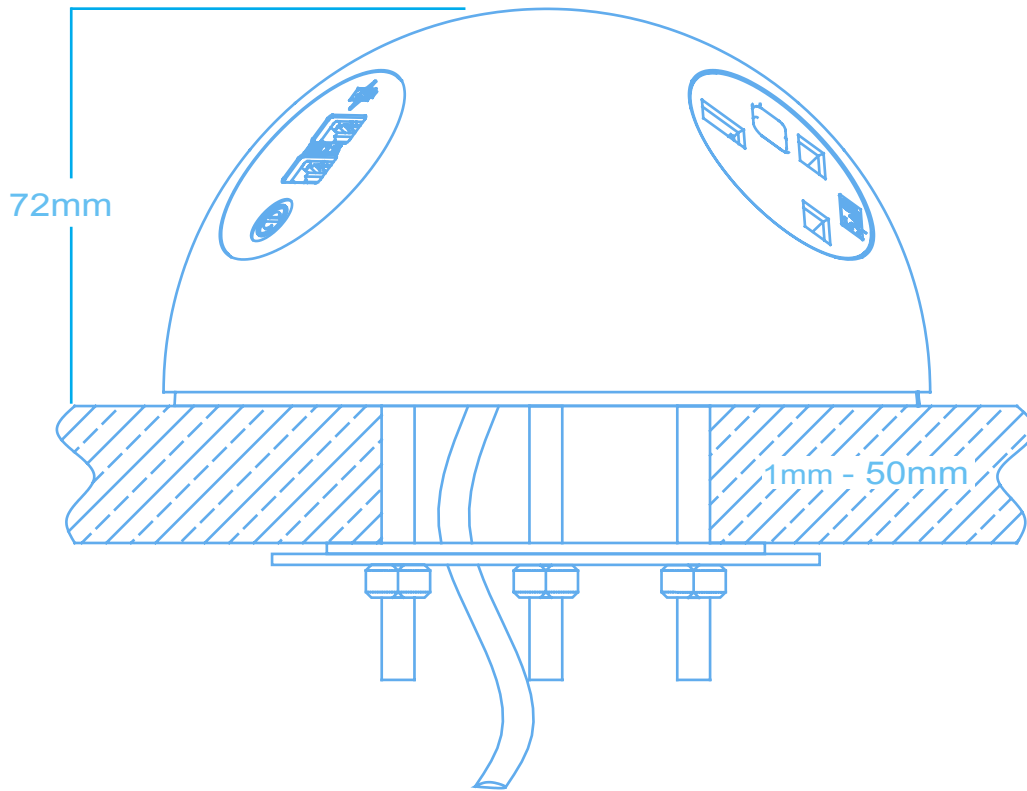

Working in conjunction with the GSMA, the EC has stated its intention to reduce electronic waste, associated with millions of mobile device chargers being discarded on an annual basis. As a result mobile device manufacturers have agreed to standardise on USB charging and it is expected that new mobile phones sold in the EC will no longer come with mains plug adaptors.

green friendly

In light of this, PLUTO and our TUF Charge are perfect partners, providing a mixture of mains and USB charging outlets to accommodate the needs of any small team whatever the future technology requirement.

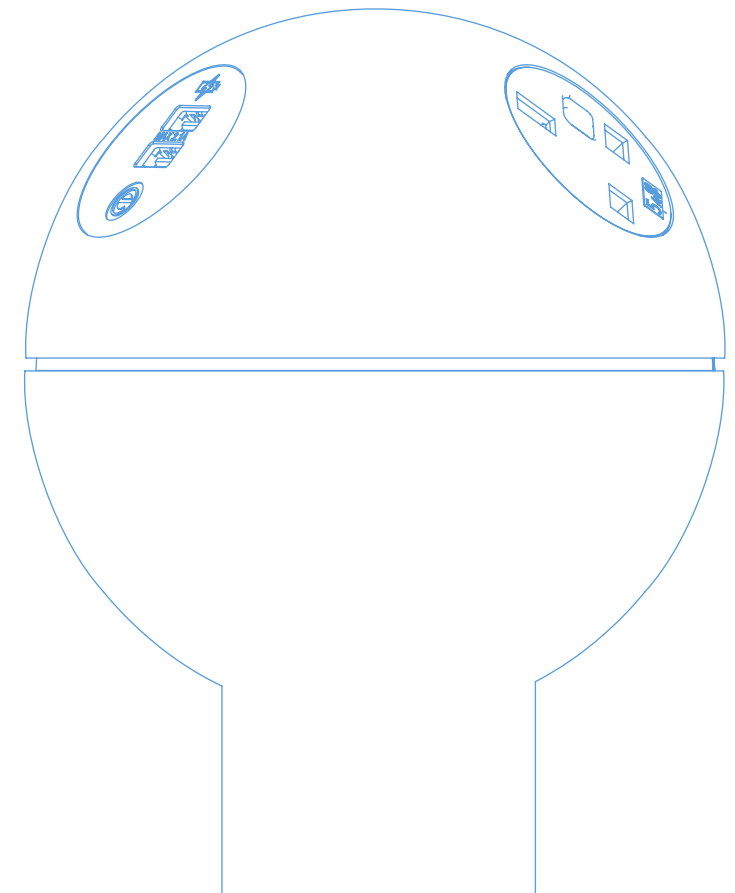

Fully compliant with all applicable regulations: BS5733, BS6396, BS1363, IEC 60884, EN 60950, PLUTO can safely be used in any environment

PLUTO has been designed from the outset to provide connectivity, in many guises, to suit the environment in which it is required.

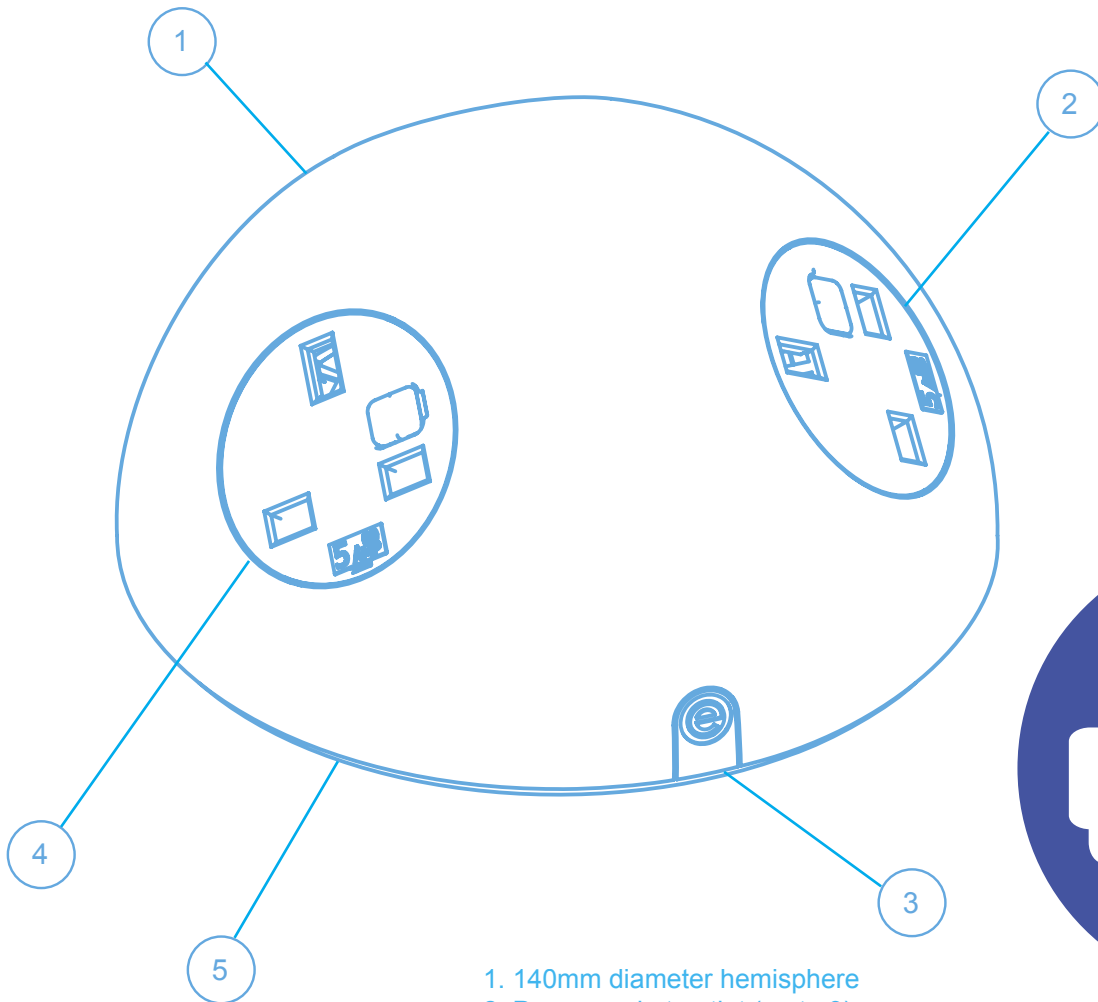

As a hemispherical dome, PLUTO can be fixed over a 60mm/80mm grommet hole in the furniture to provide a seamless touchdown solution with no visible cables.* It has also been designed with a side power cable exit so that it can be used as a very informal, but design led, mobile power outlet that can be moved across the work surface to the user in most need.

fit my pluto!

As a complete sphere, PLUTO is ideal for use in breakout areas mounted on its own leg and positioned next to soft-seating. If made taller, it can accommodate the requirements of multiple users standing around a small touchdown surface

1. 140mm diameter hemisphere
2. Power socket outlet (up to 3)
3. Side exit for power cable only
4. Power socket can be substituted with data/USB
5. Power and data can exit via the base in a fixed situation

Pushing the boundaries further, and in keeping with the revolution in modern offices, OE Electrics want to ensure the PLUTO is FUN

State of the art finishes can be applied to the PLUTO dome to either blend PLUTO in or make it stand out – from simple painted finishes to carbon fibre effect, camouflage or even leopard skin! In addition, with soft touch, rubber or flock textures, PLUTO not only looks the part, but it feels it as well!
