Moulded panel

Premdor moulded panel doors incorporate quality FSC® accredited one piece facings* offering excellent appearance and performance. They are available in a wide choice of designs, sizes and core constructions, making them a versatile door choice. The range has third party environmental accreditation supplied with chain of custody.

Glazed Canadian range

The Canadian range features individual bevelled glass pieces within chrome effect glazing bars, making this range a stunning alternative to conventional glazed interior doors.

Glazed Manhattan

Bold and impressive, the Manhattan range will add style to any home. The clean and simple lines give a modern finish to the range. Manhattan doors have plant on decorative lead effect on the glass, supplied in a choice of either satin white or chrome effect. This leading is not suitable for further finishing on site.

Masonite® ladder moulded

Masonite®
ladder moulded

- An exciting shallow moulded design exclusive to Premdor.
- Ladder design gives a modern twist to a popular traditional timber door style.
- Smooth surface allows for a contemporary paint finish.
- Simple design suits both modern refurbishment and new build projects alike.
- Quality moulded panel facings.
- White base coated faces.
- Smooth faces suitable for paint finishing.
- Now available in a new range of Semi Solid and Safe 'N' Sound core options.
- Glazed versions available (see page 12 for suitable designs).
- Option plus factory servicing is available, see page 76 for details.
- Pair maker available allowing for the creation of a door pair with any 35mm internal door.

Interior glazed moulded options

Design code: M4M

Design code: M6M

Design code: M6E

Design code: M6G

Design code: M6H

Design code: M4G

- A range of factory fabricated, fully glazed openings are available, as illustrated.
- FD30 and FD60 Fire doors are BWF Certifire approved.
- The range meets all the necessary fire requirements of the building regulations.
- For price and availability please contact our sales office.
- Now available as non fire rated Safe 'N' Sound doors.

- Door designs shown are available as Safe 'N' Sound and FD30 fire doors.
- FD60 fire doors available for M4M, M6M & M4G designs.
- Glazed FD30 fire doors are supplied with clear unwired fire rated glass fitted. Wired option also available.
- Obscure glass option available on Safe 'N' Sound doors only.
- Other glazing styles available upon request.
- Primed timber glazing cassette, or bead (foil wrapped MDF).
- Textured or smooth moulded panel facings.
- White base coated faces.

All fireshield FD30 and firemaster FD60 fire doors are third party certified within the BWF Certifire Scheme. This means that every fire door is monitored and recorded throughout the production process, to arrive with the end user fully performance rated.

An important feature of the scheme is the unique BWF Certifire label. Designed to be tamper proof, this enables the door to be identified easily once installed. In addition, detailed information is supplied with each door, to assist installation.

Apertures should not be cut in fire doors on site. By doing so performance in a fire situation can become seriously impaired, and the original door certification is invalidated.

Premdor moulded skin fireshield FD30 and firemaster FD60 fire doors are compliant with British Standard testing and supported under audit by the BWF/Certifire accreditation scheme. This scope of approval includes glazed designs.

Fireshield doors are glazed to ensure performance integrity in a fire situation. Unglazed fire doors are not available.

OPTION PLUS

Options can be ordered on all doors where suitable.

- Non standard sizes
- Factory priming (face only)
- White factory paint finishing (face only)
- Factory machining for hinges and/or latches

- Supply and fit standard interior latches or lock
 - Supply and fit intumescent seals to Fire doors
- Please see page 76 for further information.
- Please note that these options may not be available with some moulded panel

door sizes, due to technical limitations.

Fireshield doors are only available glazed to ensure performance integrity in a fire situation. Prices available on application.

Moulded door general specification

Door thickness

Imperial doors: 35mm (1 3/8").

Metric doors: 40mm.

Fireshield doors: 44mm (1 3/4").

Firemaster doors: 54mm (2 1/8").

Modification

Doors are not suitable for rebating to form a pair. Fire doors must not be trimmed on top edge, and only up to 5mm on bottom edge and 3mm on stiles. Other doors can be trimmed by up to a maximum of 5mm off any edge.

Glazing

Non fire rated glazed doors are supplied with glass toughened to the requirements of BS EN 12600 and tested to BS EN 12150.

Door finishing

Moulded panel doors are suitable for paint finish only. Door faces are supplied with a white base coat ready for on site finishing. Base coat and priming does not seal the door fully against moisture penetration on site. For white factory finished doors - see page 76.

Touch up paint

Order code: 43075 - Cans

Lock block location

'Lock' is inkjetted on the top edge of the door on the side where the lock block is positioned. The lock block position is **880mm** from the top of the door to the top of the lock block. The lock block is **360mm** long. See page 159.

Bi-fold doors

Bi-fold doors have the moulded panel design on both sides and are suitable for use as room dividers or wardrobe doors. The doors are supplied pre-hinged with running gear included. Door sizes shown are nominal, with actual dimensions slightly smaller to allow for door gear and clearance.

Standard core

Economy core specification, with **single lock block**, for light duty applications. See page 159.

Semi-solid core

Semi-solid doors are made with additional core components giving a heavier feel to the door. See page 159.

Safe 'N' Sound

A solid core specification, in a standard thickness door, offering a substantial feel. See page 159.

Fire door core

Moulded fire doors are constructed using a high density extruded chipboard panel within a timber frame. See page 159.

Fire doors

Premdor fireshield FD30 fire doors are compliant with British Standards and the BWF Certifire Scheme. See relevant data sheet for more details if required.

Fireshield doors are rated FD30 when hung in appropriate frame with **intumescent strips** in jambs and head, or top and long edges of the door. Glazed

Fireshield doors are supplied with clear (unwired) fire rated glass as standard.

Firemaster doors are rated FD60 when hung in appropriate frame with **intumescent strips** in jambs and head, or top and long edges of door.

Fireshield Aperture Service Team

Apertures to fire doors may only be added retrospectively by Premdor or by Premdor appointed "FAST" licensed fabricators, operating as members of the BWF/CERTIFIRE scheme. Modifications made outside of this scheme will invalidate the product certification.

Location and contact details of "FAST" licensees available on request.

Building regulations (England & Wales)

Moulded doors are offered fully compliant with Building Regulations where applicable.

Fire safety: Standard doors are tested to BS476 Part 22 and certified for use meeting Approved Document B.

Mobility: The range includes size options and designs suitable for use under Approved Document M.

Acoustics: FD30 fire doors have demonstrated a sound reduction value of up to 29Rw dB, which can assist in meeting the requirements needed for flat entrance systems against Approved Document E.

In all cases doors require to be hung appropriately, in a suitable frame with fitted perimeter seals and compliant hardware. Please contact Premdor for details.

Scottish and Northern Irish Regulations may also be applicable on a Regional basis and doors are similarly compliant.

Guarantees

Guaranteed for ten years against manufacturing defects.

Guarantees are subject to the products being treated in accordance with Premdor's instructions for storage, handling, installation, maintenance and use and exclude ironmongery where applicable. Failure to follow these instructions may invalidate your guarantee. This does not affect your statutory rights.

Environmental policy

Moulded standard core doors are environmentally third party certified FSC®. (Excludes 5 panel smooth doors).

Semi-solid core, Safe 'N' Sound and Fireshield doors are all environmentally third party certified PEFC. (Excludes 5 panel smooth doors).

Our largest manufacturing and central warehouse facility in the UK is located at Barnsley and has been independently accredited to meet the requirements of the environmental management standard ISO 14001.

All of our timber based material suppliers are obligated to ensure that, as a minimum, wood is sourced in accordance with local legal forestry and logging controls, and is EUTR compliant. The majority of timber used in Premdor manufactured products is certified under FSC®, PEFC, MTCC, CSA or SFI approval. These schemes are recognised under guidance issued by the Government's Central Point of Expertise on Timber (CPET), ensuring credible environmental control.

Relevant products are marked with the icon shown, based on information correct at time of printing.

Product availability

All items shown tint flashed are normally available ex-stock.

Items shown highlighted are available on a reduced leadtime.

Ordering

Door prices exclude ironmongery and frames. Except where stated, doors supplied will require on site decoration. When ordering always state product codes. All prices exclude VAT. Specifications may vary at our option.

Trademarks

Safe 'N' Sound, Fireshield and Firemaster are all Premdor trademarks.

In order to gain the full benefits of Premdor's product guarantees and prolong life, it is essential that the following guidelines are adhered to.

Storage and handling

Doors should be stored and handled as prescribed in the BS Code of Practice BS 8000 Part 5 1990.

Doors should be laid flat on three equal thickness bearers located along the door length to evenly distribute weight and avoid damage, and kept dry and clean inside any polythene packaging until immediately before painting/staining. Do not store or install in an area which may be subject to extremes of temperature. Use a dry, well ventilated building, in areas which have not been recently plastered.

It is essential that precautions are taken to prevent moisture content build up. Particular care is needed in centrally heated or air conditioned buildings. Premdor must be informed at the time of tender and order whenever doors are needed for such buildings.

The testing and rapid switching on and off of heating during the construction is detrimental to joinery.

Doors should not be exposed to sunlight since natural shading or fading might occur. It is important that any packaging material (shrink wrap etc.) is left on the door for as long as is practically possible to avoid damage to door surfaces. This is particularly relevant to fully finished products.

Installation

Doors should be fitted as prescribed in the BS Code of Practice BS 8000 Part 5 1990.

It is essential that doors be fully sealed and any air gaps plugged, immediately after delivery. They should be sealed and knotted and primed on both faces and all four edges, and should then be fully finished, preferably before installation. Edges of flush doors with lacquer finish should be sealed and if any surface is subsequently cut, it should be painted or lacquered before the door is fixed into position. This particularly applies when end grain is exposed.

It is essential that if the preservative seal is broken in any way (e.g. trimmed, drilled or cut for letter box, hinges etc.) then any such exposed area should be preservative treated, painted/stained.

If, when installing doors, a reduction in overall size is required, it is important that equal amounts are taken from opposite edges. Allowable trim dimensions available on request.

When fitting locks and latches in doors, it is important to ensure that the construction and performance of the door is not adversely affected.

If a mortice lock is to be fitted, it must not be located opposite the mid rail of the door. Letterplates, locks etc. should be installed prior to the door being hung.

For lightweight interior doors use 1 pair 3" hinges. If the weight of the interior door exceeds 20kg, or if the door is to be hung between areas with different humidity levels, then 1 1/2 pairs of hinges are required.

Fire doors must be installed in accordance with Certifire instructions that are provided with each door.

Finishing

Decoration should be carried out in accordance with BS 6150: 2006 and BS 8000 Part 5: 1990.

Products must be clean and dry prior to finishing, having a moisture content which is no greater than the average for the intended location. Always follow the instructions provided with the stain or paint which is to be applied.

It is important that the finishing system is balanced by equal application to both sides at the same time to ensure that an imbalance of moisture does not occur, particularly in the decoration of doors.

The complete surface area should be fully treated with topcoat paint or stain prior to installation. To ensure adequate coverage at least three coats of topcoat paint/stain needs to be applied. All edges, rebates for glazing and any areas which have been cut, drilled, etc must be fully painted/ stained to the same standard as the rest of the door.

Premdor has no control over customer applied finishes of doors and therefore cannot accept any claims for problems of any type relating to customer finishing of the doors.

Do not use oil (e.g. Danish oil) waxes, polishes or dyes as they do not properly seal the door and can lead to delamination of the veneer.

Coatings must be regularly maintained to prevent a breakdown of the protective paint or stain film, which can lead to moisture ingress/loss and deterioration of the door.

Please note

Finger-jointed materials may be used in manufacture, enhancing product stability.

Optional Premdor aperture details are shown on pages 30 and 71.

Shaker

The simple lines of the shaker oak range offer a style that is both effective and refreshing.

Offered as a 4 panel door and a matching glazed option, a FD30 fire door is also available.

All shaker oak doors are supplied unfinished ready for on site decoration.

Oak recessed panel

The recessed panel collection is guaranteed to add splendour to the home. Unique recessed panel designs add extra definition and help to enhance the real wood oak veneers. Doors are supplied unfinished ready for finishing to the desired colour. FD30 fire door options are also available.

Traditional oak

The traditional oak selection has all the majestic properties expected of oak doors.

All doors exploit raised and fielded panels to add stunning definition, in an array of designs.

Available unfinished and pre-finished with a high-performance three-coat system, FD30 fire doors and glazed options complete this range.

Contemporary oak

Premdor's exhilarating contemporary oak door range includes some of this year's most exciting door styles. All faced with real oak veneers and constructed with a robust solid core, dazzling glazed options and FD30 fire doors are also available. Doors are either unfinished or pre-finished to suit your requirements.

Pine

Supplied unfinished ready for onsite decoration, pine doors are manufactured using dowel and glued construction from clear pine and over-veneered solid timber components. Glazing is factory fitted.

General product specification guidance for this range can be referred to on page 45.

Timber door general specification

Door thickness

Imperial doors: 35mm (1³/₈")
or 44mm (1³/₄").

Metric doors: 40mm
(except Pine doors).

Fireshield doors: 44mm (1³/₄").

Standard timber doors can be trimmed by up to 5mm off any edge. Fire doors can be trimmed up to 3mm from either side and 6mm from the bottom (do not trim top of door).

Door finishing

Croft, Roma, 4 panel, 6 panel, 2 light glazed, Wiltshire, Salisbury, Shaker, Croft solid, Croft solid glazed, Milano, Nice, Monaco and Pine doors are supplied un-finished and ready for finishing on site with paint or stain.

Apply a minimum of 3 top coats of a high quality interior door finish specially formulated to protect interior doors following the manufacturer's recommendations and ensuring that the door is correctly primed and undercoated.

We do not recommend the use of varnish as there may be adhesion problems due to the resinous nature of some hardwoods. Do not apply varnish coatings to this door.

Do not use Oils (e.g. Danish Oil) Waxes, Polishes, or dyes as they do not properly seal the door and can lead to delamination of the veneer.

Coatings must be regularly maintained to prevent a breakdown of the protective paint or stain film which can lead to moisture ingress/loss and deterioration of the door.

4 panel, 2 light glazed, Croft solid and Milano are also supplied as a fully finished options. Doors are finished with a 3 - part Polyurethane coating for lasting protection.

Pairs

Single doors featuring bevel edged or decorative glass should be hung selectively to ensure fully matched glazing if used as pairs.

Options

Please note that Option Plus servicing is not available on timber doors.

Timber doors are not available for use as SpeedSet or SoundSecure doorsets.

Environmental policy

All oak doors are environmentally third party certified PEFC.

Guarantees

Guaranteed for five years against manufacturing defects apart from all Pine doors which are guaranteed for two years.

Guarantees are subject to the products being treated in accordance with Premdor's instructions for storage, handling, installation, maintenance and use and exclude ironmongery where applicable. Failure to follow these instructions may invalidate your guarantee. This does not affect your statutory rights.

Product availability

All items shown **tint flashed** are normally available ex-stock.

Ordering

Door prices exclude ironmongery and frames. Except where stated, doors supplied will require on site finishing. When ordering always state product codes. All prices exclude VAT. Specifications may vary at our option.

Roma panel

In order to gain the full benefits of Premdor's product guarantees and prolong life, it is essential that the following guidelines are adhered to.

Storage and handling

Doors should be stored and handled as prescribed in the BS Code of Practice BS 8000 Part 5 1990.

Doors should be laid flat on three equal thickness bearers located along the door length to evenly distribute weight and avoid damage, and kept dry and clean inside any polythene packaging until immediately before painting/staining. Do not store or install in an area which may be subject to extremes of temperature. Use a dry, well ventilated building, in areas which have not been recently plastered.

It is essential that precautions are taken to prevent moisture content build up. Particular care is needed in centrally heated or air conditioned buildings. Premdor must be informed at the time of tender and order whenever doors are needed for such buildings.

The testing and rapid switching on and off of heating during the construction is detrimental to joinery.

Doors should not be exposed to sunlight since natural shading or fading might occur. It is important that any packaging material (shrink wrap etc.) is left on the door for as long as is practically possible to avoid damage to door surfaces. This is particularly relevant to fully finished products.

Installation

Doors should be fitted as prescribed in the BS Code of Practice BS 8000 Part 5 1990.

It is essential that doors be fully sealed and any air gaps plugged, immediately after delivery. They should be sealed and knotted and primed on both faces and all four edges, and should then be fully finished, preferably before installation. Edges of flush doors with lacquer finish should be sealed and if any surface is subsequently cut, it should be painted or lacquered before the door is fixed into position. This particularly applies when end grain is exposed.

It is essential that if the preservative seal is broken in any way (e.g. trimmed, drilled or cut for letter box, hinges etc.) then any such exposed area should be preservative treated, painted/stained.

If, when installing doors, a reduction in overall size is required, it is important that equal amounts are taken from opposite edges. Allowable trim dimensions available on request.

When fitting locks and latches in doors, it is important to ensure that the construction and performance of the door is not adversely affected.

If a mortice lock is to be fitted, it must not be located opposite the mid rail of the door. Letterplates, locks etc. should be installed prior to the door being hung.

For lightweight interior doors use 1 pair 3" hinges. If the weight of the interior door exceeds 20kg, or if the door is to be hung between areas with different humidity levels, then 1 1/2 pairs of hinges are required.

Fire doors must be installed in accordance with Certifire instructions that are provided with each door.

Factory finished products

Coated surfaces require regular maintenance and cleaning at least annually to remove surface pollution. Some 'chalking' of the finish may occur over time due to natural erosion of the microporous paint film. This does not detract from the systems protective performance.

On occasion timber products may exude resin after installation. Typically, if resin is present this 'bleeding' cannot be prevented.

Discolouration can occur which will require attention and maintenance to retain the aesthetics and integrity of the coating. Resin exudation is excluded from our performance guarantee.

Finishing

Decoration should be carried out in accordance with BS 6150: 2006 and BS 8000 Part 5: 1990.

Products must be clean and dry prior to finishing, having a moisture content which is no greater than the average for the intended location. Always follow the instructions provided with the stain or paint which is to be applied.

It is important that the finishing system is balanced by equal application to both sides at the same time to ensure that an imbalance of moisture does not occur, particularly in the decoration of doors.

The complete surface area should be fully treated with topcoat paint or stain prior to installation. To ensure adequate coverage at least three coats of topcoat paint/stain needs to be applied. All edges, rebates for glazing and any areas which have been cut, drilled, etc must be fully painted/stained to the same standard as the rest of the door.

Premdor has no control over customer applied finishes of doors and therefore cannot accept any claims for problems of any type relating to customer finishing of the doors.

Do not use oil (e.g. Danish oil) waxes, polishes or dyes as they do not properly seal the door and can lead to delamination of the veneer.

Coatings must be regularly maintained to prevent a breakdown of the protective paint or stain film, which can lead to moisture ingress/loss and deterioration of the door.

Please note

Finger-jointed materials may be used in manufacture, enhancing product stability.

Interior flush doors

Veneer Match

Veneer Match is a new range of real wood veneered doors designed to eliminate the inconsistencies that can occur in grain pattern and colour. Ideal for corridor locations or any situation where consistency is paramount, each Veneer Match door offers uniformity of colour and grain pattern. Available in Oak, Ash and Walnut colours. Now also available in 2 stile oak and walnut.

Innova™

Innova™ doors are faced with panel effect veneers inlaid with real wood in a one panel design. Inlays are as follows: White oak is inlaid with Bubinga and Ash inlaid with American Walnut. Door faces are fully finished with a hard wearing lacquer to give a smooth, wipe clean surface.

Veneer Plus & Veneer

Natural wood veneers offer a luxury appearance from a cost effective flush door specification.

Veneer range door faces are fully face lacquered in clear satin finish. Vertical door edges feature timber lippings to complement the choice of either dark or light hardwood. Core options include certified fire doors.

For an enhanced weight door, offering a really robust feel and higher level of acoustic performance in use, Veneer Plus doors are the solution. This offers a solid core as standard within a 35mm door thickness.

Horizontal veneers and duo veneers complete an expanded veneer plus range.

Dura-Oak & High Pressure Laminate

Dura-Oak is a highly durable door manufactured using the latest innovative surface technology resulting in a consistent appearance and tough finish.

The new High Pressure Laminate range offers excellent versatility and produces a range of impact and scratch resistant doors suitable for a range of high-traffic environments.

Foil & Foil Plus

Authentic appearance wood grain effect faces from our foil range require no further decoration. Matching appearance between doors is guaranteed. Clean lines make these products a popular choice for modern interiors with fire doors and standard glazed options available to ensure Building Regulation compliance.

For a more premium grade foil, foil plus doors offer an authentic grain appearance and solid core construction.

Paint Grade

The Popular paint grade door is ideal for basic applications, offering a timber veneered face surface ready for preparation, site priming and paint decoration. Popular paint grade doors are now available with PEFC chain of custody and with new un-lipped version. Paint grade plus with its factory pre-primed surface complete this comprehensive offer.

Interior veneer match

- Our Veneer Match range offers a true veneer consistency of grain pattern and colour between each and every door.
- Ideal for corridor locations or any situation where a consistent appearance is essential.
- Made from real wood veneers and available in Oak, Ash and Walnut colours.
- Solid core construction and an improved smooth lacquer finish makes Veneer Match the obvious choice for quality and uniformity.
- Supplied with PEFC chain of custody.
- Solid core, 30 & 60 minute fire doors and framed 30 minute fire door options available.
- Clear and wired 16G glazed fire doors available. For other glazing options see page 71.
- 35mm solid core construction offers added strength and acoustic barrier capabilities compared with a standard core construction.
- Choose Veneer Match when the variation that can occur with our standard veneer products needs to be eliminated.

Interior 2 stile veneer match

White oak 2
stile veneer match

Walnut 2 stile
veneer match

- Growing in popularity we welcome two new veneer types into our veneer match family.
- New style veneer match interior door with modern cross grain effect.
- Available in white oak 2 stile and Walnut 2 stile designs, both manufactured from real wood veneers.
- Our Veneer Match range offers a true veneer consistency of grain pattern and colour between each and every door.
 - Supplied with PEFC as standard.
 - Solid Core construction on 35mm & 40mm doors.
 - FD30 and FD60 fire doors available.
 - Improved smooth lacquer finish.
 - Ideal for corridor locations or any situation where a consistent appearance is essential.
 - Eliminate variation that can occur with standard veneers.

Ash inlaid with American Walnut

White oak inlaid with Bubinga

Interior flush veneer plus

- Latest veneer designs available in two distinctive line styles, and popular horizontal options.
- The oak duo combines two of the most popular veneer types in a single door, White oak and Walnut.
- Simple designs which provide a contemporary finish for high quality domestic situations.
- Glazed fire door options allow for a professional, high end commercial finish. See page 71.
- Supplied with PEFC chain of custody as standard, excludes Firemaster.
- Suited to the discerning specifier seeking a high quality veneered door.
- The 35mm solid core construction offers added strength and durability when compared to the usual light duty construction of most domestic flush doors.
- Veneer plus is ideal for environments where enhanced noise control and a little added door muscle can make all the difference.
- Improved acoustic barrier capabilities for when enhanced sound proofing is desired. Please contact Premdor for details.
- Clear glass toughened to BS EN 12600.
- Pair maker available allowing for the creation of a door pair with any 35mm internal door.

Interior flush veneer

- The attractive appearance of a traditional wood faced flush door remains a popular and practical choice.
- For replacement use or high quality new build applications wood veneered doors offer an established and 'no fuss' design solution.
- Door faces are fully factory lacquered and veneered edge to edge, masking the applied vertical edge lippings and presenting a clean smooth appearance, with the unique natural shade and grain variations of hardwood.
- Use veneered doors to create a co-ordinated wood ambience in your home.
- Supplied with PEFC Chain of Custody as standard.
- Select from a wide range of veneer options, to complement all types of project.
- Temperate grown timbers from Europe and North America are included in the range alongside cost effective alternatives from established and controlled tropical sources.
- Option Plus and factory servicing is available, see page 76 for details.
- All veneers are natural products and some variation should be expected.
- Wide range of factory glazed fire door designs available, see page 71.
- Matching veneers are available. Contact the sales office.
- Framed construction Fireshield doors now available.

- Factory machining for hinges and/or latches.

- Supply and fit standard interior latches or lock.
- Supply and fit intumescent seals to Fire doors.
Please see page 76 for further information.
- Fireshield FD30 fire rated.
- Firemaster FD60 fire rated.

PEFC
CHAIN OF CUSTODY
AS STANDARD

Interior Dura-Oak

Dura-Oak

- Our 'highest specification' door. The Dura-Oak is a high durability door manufactured using the latest innovative surface technology.
- Textured effect surfaces are realistic, warm and pleasant to touch.
- Greater durability and scratch resistance than a foil door, with the guaranteed colour consistency compared to a veneered door.
- Three times the scratch and scrape resistance of a standard foil door and twice the scratch and scrape resistance of a veneered door.
- Supplied with PEFC chain of custody as standard.
 - Available in fully matched white oak finish.
 - Our most realistic authentic grain appearance.
 - Premium construction, combining a solid core as standard with a concealed lipping on two vertical edges.
 - Innovative manufacturing technology uses electron beam-curing acrylate resins.
 - Wide range of factory glazed fire door designs available, see page 71.
 - Pair maker available allowing for the creation of a door pair with any 35mm internal door.

Interior white laminate **new**

Interior white laminate

- A new range of interior white high pressure laminate faced doors.
- This versatile range offers laminate surfaces with excellent impact, scratch, abrasion and crack resistant properties that are also resistant to chemical and household products.
- Suitable for high traffic public environments as well as traditional commercial and domestic applications.
- Provides a white surface finish that could never be achieved by conventional brush painting.
- Supplied with PEFC chain of custody.
- Solid core construction as standard on 35mm doors.
- Framed construction FD30 fire door options available.
- High quality Polyrey laminate (ref. B070 Blanc Megeve) throughout the range.
- Manufactured with over laminated 6mm oak effect hardwood lippings to the two long edges.
- Option Plus and factory servicing is available, see page 76 for details.
- Pair maker available allowing for the creation of a door pair with any 35mm internal door.

Interior high pressure laminate (HPL)

- Premdor is now able to offer a full range of high pressure laminate (HPL) faced doors.
- Ideally suited for high traffic areas where regular cleaning is essential or where there is a high risk of face damage.
- Available as single, pairs and apertured doors using traditional solid core construction, including framed 30 and 60 minute fire doors.
- Manufactured on a made to order basis, please contact the sales office for a competitive quote.

Polyrey HPL

Why use HPL:

- Excellent impact and scratch resistance.
- Superior durability and strength.
- Exceptional reproduction qualities, especially for woodgrain effects, creating an appearance that is close to perfection.
- Functional and hygienic in everyday use.

- 1 Protective overlay for printed doors.
- 2 Decorative paper impregnated with melamine resin.
- 3 Layers of kraft impregnated with phenolic resin.

Available in 80 standard colours with additional options available on request, below is a selection of the most popular finishes.

* - Supplied with oak effect lippings # - Supplied with walnut effect lippings

Interior flush foil plus

Oak foil plus

Oak foil plus

Walnut foil plus

- Foil plus flush doors combine state of the art reprographic technology suitable for modern new build or aspirational up grade use.
- Supplied in an enhanced solid core specification as standard, ensuring superior strength, operational robustness and noise reducing properties.
- The three dimensional wood grain appearance offers a superior finish compared with alternative foil doors, yet remains a cost effective alternative to authentic timber veneer.
- Supplied with PEFC chain of custody as standard.
 - Premium grade foils provide enhanced appearance when compared with standard foil doors.
 - An authentic natural grain appearance to complement timber or laminate flooring.
 - Oak or Walnut options are fully matched, with ensured colour consistency and grained appearance.
 - Vertical door edges have solid lippings.
 - Full range available from stock.

OPTION 5

Options can be ordered on all doors where suitable.

- Factory glazing.
- Factory machining for hinges and/or latches.

- Supply and fit standard interior latches or lock.
- Supply and fit intumescent seals to Fire doors.

Please see page 76 for further information.

■ Firefield FD30 fire rated.

Interior flush paint grade plus

- Door faces are factory pre-primed to reduce decoration time and site cost. The surface is dense and very smooth, making it the perfect choice if easy on-site finishing is essential. On lipped doors the lippings are supplied un-primed and require preparation and finishing on site).
- Lipped version available for when lippings are essential to the specification.
- PEFC chain of custody certification.
 - Where a simple or minimalistic door appearance is required or necessary, a trouble-free paint grade flush product remains the popular choice.
 - Paint grade plus offers real value and a cost effective solution where the contract budget or time is tight.
 - Full PEFC chain of custody certification is standard making this door ideal for when contractual environmental statutes or compliance exists. Excludes Firemaster doors.
 - Smooth, high density faces ensure that paint grade plus doors have the optimum base for a high quality painted finish.
 - Doors are available in a lipped or un-lipped specification.
 - Pair maker available allowing for the creation of a door pair with any 35mm internal door.
