# The Maxx Family - MaxxConnect™

## Overview

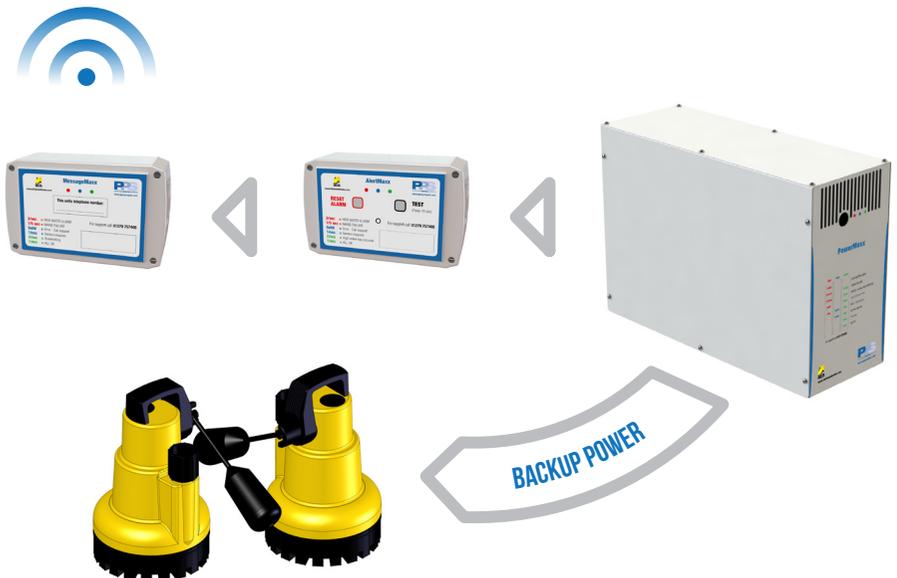

The MaxxConnect family is a range of products specifically designed for the pump industry. An intelligent approach toward design has resulted in optimum functionality, maximum efficiency and ease of installation and service. Important data can be retrieved remotely from MessageMaxx.

### INFO, WARNING & CRITICAL MESSAGES RECEIVED TO FIVE PHONES

## Why introduce this range?

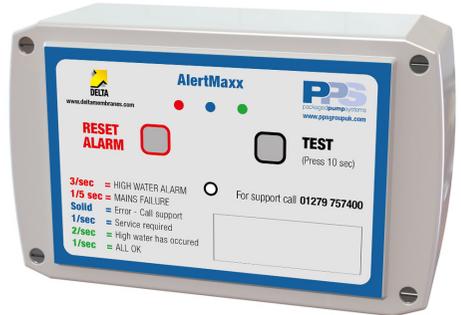

It offers total peace of mind and if the unimaginable occurs, the pump stations will warn when a problem arises. In a basement environment the consequences may be catastrophic and could mean the difference between an expensive insurance claim for water damage or not.

# AlertMaxx™ - High Level Alarm

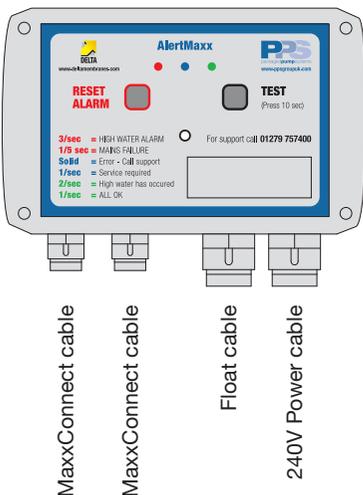

## Overview

An innovative, independent high level alarm powered by 240V with a 6V battery backup in case of power failure. In its basic format it is easy to install, requiring just two fixings and connection of mains power and float switch. Status for All OK, high water alarm, previous cancelled alarms, mains failure & service required are clearly displayed via a simple LED language. Volt free contacts are included as standard where connectivity to building management systems is required.

AlertMaxx is available to suit two applications;

1. **Foul water** - AlertMaxx is supplied with a robust & reliable pendant type float switch to be fixed to pipework, pump or free hanging, utilising a float weight (optional extra [DMS-295](#)) to allow correct operation. [Order code DMS-269](#)
2. **Ground water** - AlertMaxx is supplied with a broken finger float switch. This gives accurate operation and allows an alarm signal to be given after pump one fails, leaving pump two (where fitted) to operate. [Order code DMS-270](#)

## Features & benefits

- Simple installation
- Audible & visual warnings
- Battery backup in case of power failure
- Service reminder
- Communicates to other products in the MaxxConnect family
- Volt free contacts for external siren & beacon connectivity
- W: 115mm x D: 95mm x H: 60mm

# PowerMaxx™ - Battery Backup

## Overview

PowerMaxx is specifically designed for pump applications. It can run 2 x V3 ground water pumps without mains power for up to 4 days depending on number of cycles/hr, sits in standby mode for over three weeks and is virtually inaudible.

1 or 2 pumps are directly fed through PowerMaxx. If power failure occurs, the pump/s automatically take power from PowerMaxx which will have been fully charged during mains operation. PowerMaxx will automatically recharge when mains power returns.

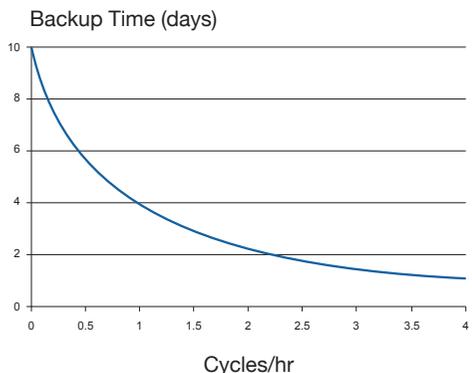

Installation is simple, PowerMaxx is free standing and can be installed in any dry ventilated area. As this unit is fitted in the power line, no additional electrical spurs are required.

PowerMaxx is part of the MaxxConnect family and can operate as a standby unit or can be used in conjunction with AlertMaxx & MessageMaxx. It can also be used as a direct replacement for previous versions. [Order code DMS-280](#)

## Features & benefits

- Specifically designed to offer backup to pumps in case of power failure
- Serves 2 x V3 ground water pumps
- Will power a pump for 4 days based on 1 cycle/hr
- Operates in standby mode for 10 days
- Can operate as a standalone unit
- Can be retrofitted to existing installations
- Communicates to other products in the MaxxConnect family
- W: 155mm x D: 425mm x H: 300mm

# MessageMaxx™ - Telemetry

## Overview

For total peace of mind the MessageMaxx is combined with the AlertMaxx to give remote monitoring when clients are away from their property. Messages are sent to predetermined phone numbers using GSM technology and are received in text format.

Installation is simple requiring just two fixings and connection to the AlertMaxx via one cable, no external power is required and back up in case of mains failure comes from the battery fitted in the AlertMaxx.

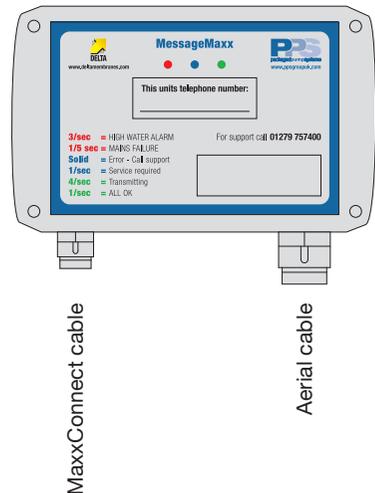

Status for All OK, high water alarm, previous cancelled alarms, mains failure & service required are clearly displayed via a simple LED language and mimics the AlertMaxx.

Order code **DMS-279**

## Features & benefits

- Info, warning and critical messages sent via text message to 5 phone numbers
- Communicates to other products in the MaxxConnect family
- Can be interrogated remotely via text message from any stored mobile phone
- W: 115mm x D: 95mm x H: 60mm

# After Sales Service

All Delta Membrane pump systems are fitted & can be maintained by our partners, Packaged Pump Systems. With our long-term relationship we ensure that the system selected is fit for your requirements, is delivered on time, professionally installed & offers hassle free on-going operation & maintenance.

- Fully stocked vans
- Emergency breakdown service
- Out of hours service
- Planned maintenance
- Factory trained engineers

## Precise Passionate Service

### Precise

Fully trained in-house service engineers to maintain, enhance & replace equipment.

### Passionate

Bespoke design, manufacturing & installation ensuring our equipment is fit for every requirement.

### Service

From fitting to scheduled maintenance we ensure your needs come first.
