

NEW DIMENSIONS IN LIGHTING

PIXALUX®

The incredible illuminated panel

Pixalux® is a solid LED illuminated panel that is super-bright and can be supplied single or double-sided.

The Pixalux® super bright light panel combines the function of joinery and lighting to create modern experiences in retail, commercial and domestic applications.

How is Pixalux® different from other LED Light Panels?

- Structural - the panels are solid enough to build with. Combine them with joinery or acrylic items to create display units, shelving, furniture, architectural items, lighting, signage and a lot more.
- Panels can actually replace wood or other flat panels within an item of furniture.
- Integral diffusers - provide an even spread of light.
- Frameless - unique, patented method of construction means that the light goes right to the edge of the panel.

Robust

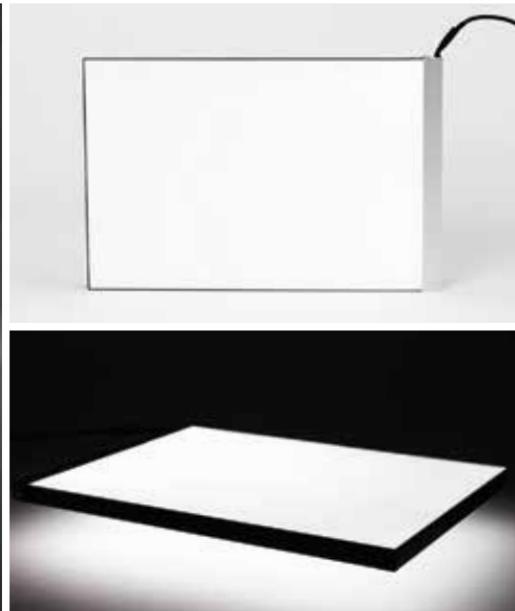

- Double-sided - the same light output on either side of the panel. Also available as single-sided.
- Sandwiched acrylic panels for structural strength.
- Choice of colour temperature. Cool White, Daylight, Warm White, or RGB.
- Choice of edge finishes. Glowing white, white, black or silver. Special colours on request.
- LEDs are housed in a silver, black or white profile.
- Lifespan of LEDs 50,000 hrs approx.

Shadow-Free Light

- Panel Dimensions
16 mm thick,
Max length 1600mm
Max width 800mm
