

tweeter
ex-centric rotation system.

RECESSED

SURFACE

Tweeter introduces new levels in flexibility, both in movement as in lighting application, destined to become a longstanding classic.

EXTERIOR

With Tweeter Delta Light® introduces the

EX-CENTRIC ROTATION SYSTEM®

The ERS is characterized by an asymmetrical hinge joint, combining extreme rotation and tilting abilities, all in one swift whirling motion.

The application of the ERS not only upgrades movement of the fixture, but more importantly also provides

ADVANCED LIGHTING ABILITIES.

The **DOUBLE SHELL** design prevents ceiling exposure, while the flexible inner shell tailors for any lighting need.

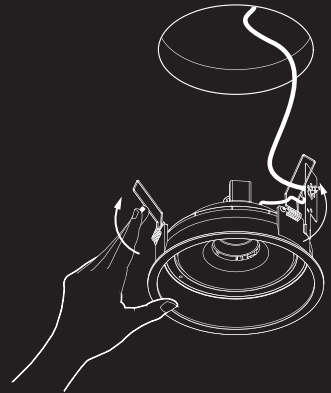

Ultimate refinement is reached with the **Oreo** principle a subtle aureole of light circling around the central led, for improved lighting aesthetics.

EASY INSTALLATION

TRIMLESS REO

STD - SMALL TRIM DEEP

The **Tweeter Trimless FRL & SBL** were added with the launch of The Lighting Bible® 11. These two versions feature a more powerful 18W powered. When finished with the SBL glass you will obtain a more diffuse light effect, with the Fresnell lens results in more delineated 35° light beam.

TWEETER ON

Tweeter On excels thanks to its ingenious design, refined to the last detail.

Available with single or double spot, **Tweeter On** comes with Delta Light's unique Reo led array technology, delivering a powerful, warm light.

The **Tweeter On** strikes

A PERFECT BALANCE

between lighting quality and energy efficiency, adding value to the design statement of its environment.

The shells of both the **recessed** and the **surface** mounted versions are designed to provide optimal cooling, ensuring extended lifetime of 50.000 hours for the led series.

4

The **Tweeter On 4** is available as ceiling surface mounted or suspended luminaire.

The Tweeter On

FRL / SBL

provide a more robust and
retro look & feel.

Offering a delineated 35° light beam (FRL)
or a more diffuse light effect (SBL)

OUTDOOR

The extremely manoeuvrable Tweeter is now making its presence felt in the garden in the shape of a wall fitting and posts for directional lighting. Ideal for creating highlights out of doors. One handy feature is that the outdoor models have the same rotation versatility as the indoor models. Which means the lighting can 'grow' with the plants.
